

BASE CABINET ASSEMBLY ADJUSTMENT

ADJUSTABLE EURO-LEGS

January 23, 2017

Starting today we're making a change to the feet we use on our base cabinets. We're switching from the old "screw in feet" to our new "knock in feet". Our base cabinets will now feature pre-drilled holes to house the new "knock in feet". The adjustable feet and toe-kick clips are now prepackaged, no longer requiring manual inclusion into our hardware kits, reducing some labour on the assembly line.

Old "screw in feet" system
